Payment Terms :	100% advance.
Dispatch :	1 week after receiving the P.O., payment & shipment papers.
Deliverable :	1 x USB dongle.
Warranty :	6 months from the dispatch date.
Validity :	This offer is valid till September 30, 2012.

Clarifications :

We are not liable to pay any damages, losses, costs or expenses incurred by the user or any one else, as a result of using this software. Moreover,

- The software generates nested layout & toolpath automatically. But, they may have to be modified manually, if and when required, in order to achieve optimum results.
- If MOST 2D does not have a ready-made post-processor for your machine and if you want us to develop the same, there will be additional cost towards this task, subject to technical feasibility. In such cases, you will have to provide us detailed G-M code (cnc code) specification and sample code files for your machine.
- The software is no longer shipped on a CD. You will have to download it from our website using the guidelines specified in : <http://www.most2d.com/dowmost.pdf> .
- A day long training session can be organized at mutually acceptable date at Mumbai, within 2 weeks of dispatch, at additional cost. Out-station users will have to bear the cost of the trip (including lodging / boarding), in addition to the cost of training.
- Please take care of the dongle (hardware lock) supplied by us. If you lose / misplace it and would like to get a new one, it may amount to paying full price of the software. (Replacement of a damaged lock costs much less within the warranty period / AMC.)
- After the warranty period, you will require a separate AMC (annual maintenance contract) for further support.
- Additional clarifications may appear at other relevant places in the software.
- Any service not clearly mentioned above will cost extra.
